Different compensation model for different loads

NONLINEAR LOADS

INDUSTRIAL EQUIPMENT

Induction furnaces,
static converters,VFD,
welding machines

OFFICE EQUIPMENT

Computers, servers, printers

HOUSEHOLD APPLIANCES

Fluorescent lightings, TV light,
dimmers, microwave ovens.

UNINTERRUPTIBLE POWER SUPPLIES (UPS)

WHY HARMONIC HURT YOUR SYSTEM?

Higher harmonic current would lead to capacitors' inner swelling,
oil spilling and fire risk, severe discharge, flashover and overheat,
resulting in over-current and over-voltage, accelerating the aging
of the capacitor dielectric, lower safety levels of installations ,
which cause the unnecessary financial losses .

Higher harmonic orders cause more serious distortion on the grid
voltage and current, which will increase the transformer copper
and iron losses or load imbalance.

Affect the equipment efficiency and occupy unnecessary grid
capacity. Overheating of equipment and shortening the lifetime.

| 50Hz | 150Hz | 250Hz | 350Hz | 450Hz | 550Hz | 750Hz |
| Fundamental Wave | Third | Fifth | Seventh | Ninth | Eleventh | Thirteenth |

Electrical network with poor power quality results in financial loss and safety concerns.
Good power quality not only improves the efficiency of the energy by decreasing the
loss of electrical equipment, but also guarantees that the power system could support
stable and healthy operation. It becomes more and more convenient for us both in daily
life and industry because of fast developing technology, which is also accompanied
with the development of non-linear loads .

# AHF WORKING PRINCIPLE

Optimize your harmonic compensation efficiency

Flexible Alternative Current

Harmonic Mitigation
Inverter Based PQ
Active Harmonic Filter

External CT detect the load current, DSP as CPU has advanced logic control arithmetic, could fast track the instruction current, divides the load current into active power and reactive power by using the intelligent FFT, and calculates the harmonic content rapidly and accurately. Then sends PWM signal to internal IGBT's driver board to control IGBT on and off at 20KHZ frequency. Finally generates opposite phase compensation current on inverter induction, at the same time CT also detects the output current and negative feedback goes to DSP. Then DSP proceeds the next logical control to achieve more accurate and stable system.

External CT function as eye
detect the load current

DSP as CPU has advanced logic control arithmetic, could fast track the instruction current, automatically study the grid environment and system impedance by using the intelligent FFT, and calculates the harmonic content rapidly and accurately.

CT detects the output current and negative feedback goes to DSP. Then DSP proceeds the next logical control to achieve more accurate and stable system.

DSP function as brain
Analyze and calculate harmonic content of the load current

Send PWM signal to drive IGBT control IGBT on and off at 20kHz frequency

IGBT function as heart
Generate opposite phase harmonic compensation current by rectifier and inverter

Realize harmonic compensation

UNDERSTAND HOW AHF COMPENSATE HARMONIC

Optimize your harmonic compensation efficiency

GRID ~

INPUT
⟷
OUTPUT
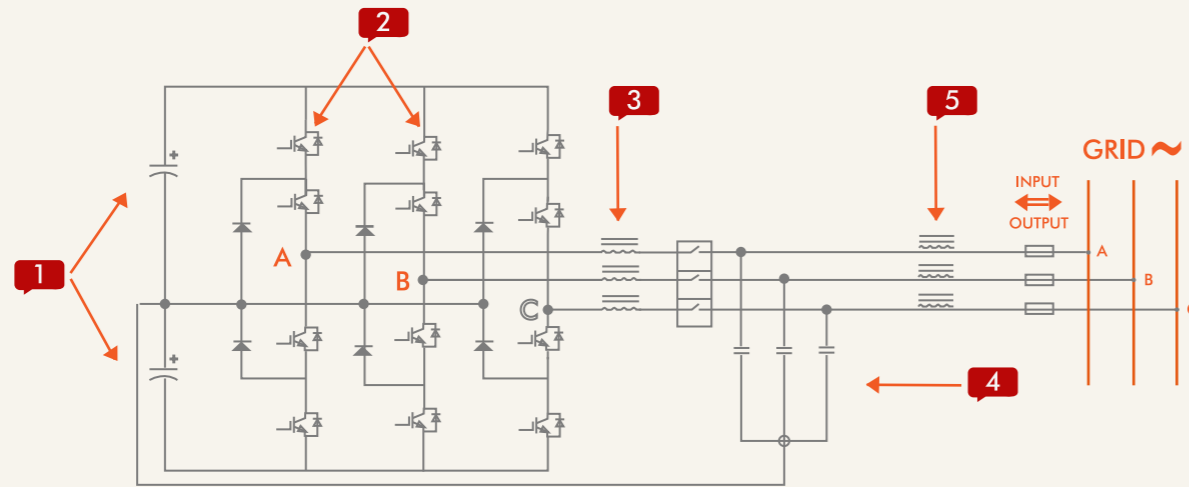

DC BUS CAPACITOR [1]

AC to DC rectifier storage

IGBT [2]

Controlled by DSP software algorithm, IGBT on-off timing selection and length could control inverter to generate a harmonic current.

IGBT generates square wave, it's outline is like sinusoid.

INVERTER INDUCTION [3]

The square wave will convert into triangular wave, which is more like sinusoid after inverter inductor.
LCL FILTER CIRCUIT

LC FILTER CIRCUIT [4]

LC filter circuit filter out impurities of the harmonic. High frequency inductor The rest of high frequency harmonic will be filtered by the high frequency inductor.

HIGH FREQUENCY INDUCTOR [5]

Both for filtering. The combination of LC filter circuit and high frequency inductor are called LCL filter circuit

KEY FEATURES AND BENEFITS

Impressive compensation effect of AHF

MODULAR DESIGN

Ultra-compact design, wall and rack mount installation, easy to use in new or exiting switch room upgraded

Module structure with highest reliability of system

3P4W and 3P3W adapted by same modules, same harmonic mitigation capability

INTELLIGENT FFT

Unique intelligent FFT algorithm automatically study the electrical system impedance, to prevent system from resonance, high system reliability

Real time electrical system resonance monitor and management
GRAPHICAL USER INTERFACE

Module 4.3 inch HMI, cabinet 7 inch HMI central

Display electrical system voltage, current, frequency, before and after THDi, Apparent/Active/Reactive power, etc
Display before and after waveform, spectrum in same page with clearly comparison
MAINTENANCE FREE DESIGN

Independent air flow separate electronic components from air flow Free of dust cleaning maintenance requirement, improve product reliability
AHF Cabinet

GLOBAL APPLICATION

Industrial Manufacturing

Food and beverage, plastic, paper, semiconductor, chemistry, pharmacy, paper, cement, oil drilling, automotive

Infrastructure

Airport-metro and railway, tunnel, water treatment, schools/campus, museums, hospital, government building

More than 2million Ampere installation around the world

Application cover Automation Manufacturing, Infrastructure, ECO building, IDC

Application cover indoor/outdoor, high altitude (hot cold) mechanical environment/dusty application, land/offshore severe environment

ECO Building

Skyscraper-Commercial building, shopping mall, apartments

IDC

Telecom, bank, internet companies

Canada, Hylife Food, AHF 1440A

Industrial Manufacturing

The United Kingdom, Glabina cheese, AHF 350A

Infrastructure

Australia, Sydney Opera house, AHF 200A

China, Beijing Tian An Men Square, AHF 440
Hong Kong Airport, AHF 150A

Dubai Airport, AHF 700A

Singapore Airport, AHF 150A

Goteborg Airport, SVG 270kVAr by invert based PQ

ECO building

Singapore, Microsoft Headquarter of Southeast Asia, AHF 1800A

South Korea
Daegu bank AHF 150A/SVG 400kVAr

HongKong(China)
China Unicom Data Centre, AHF 4425A

GLOBAL APPLICATION

Sinexcel AHF application covers Asia, Oceania, Europe, Africa, North America, South America.
